Application/Control Number: 09/943,984

Art Unit: 1632

Claims 76-105, 122-149, 188 and 189 are generic to a plurality of disclosed patentably distinct species comprising E1A protein (species A) and a nucleic acid encoding E1A protein (species B). Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

The methods for suppressing growth of a tumor comprising a neu oncogene cell comprising administering a protein is an independent invention from that of suppressing growth of a tumor comprising a neu oncogene cell. The protocols for administering the protein are materially different and separate from protocols for administering a nucleic acid. Further, the method of treatment using the E1A protein is not needed for the method of treatment using the nucleic acid encoding E1A protein, and vice versa. Thus, claims 76-105 encompass patentably distinct species based on the disclosure.

In addition, methods for suppressing growth of a tumor comprising administering a protein is classified in 514/12, whereas methods for suppressing growth of a tumor comprising administering a nucleic acid encoding E1A is classified in 514/44 and 424/93.2.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Application/Control Number: 09/943,984

Art Unit: 1632

Additionally these inventions are distinct for the reasons given above and the search required for species A to E1A protein is not required for species B to nucleic acid encoding E1A, restriction for examination purposes as indicated is proper.

Further, should applicant elect nucleic acid encoding E1A as the species to be examined, claims 106-121 and 150-187, specifically drawn to nucleic acid as the treatment agent and a pharmaceutical composition comprising nucleic acid encoding E1A gene product and a chemotherapeutic drug will be examined with applicant's election.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Deborah Crouch, Ph.D. whose telephone number is 571-272-0727. The examiner can normally be reached on M-Th, 8:30 AM to 7:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Amy Nelson can be reached on 571-272-0408. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
